

## Enterprise TCO Modeling for Self-Hosted vs Cloud RAG

Enterprise TCO Modeling for Self-Hosted vs Cloud RAG

Document ID: doc\_30\_cost\_modeling

Topics: cost, tco, tokens

### 1. Overview

This technical specification details enterprise tco modeling for self-hosted vs cloud rag within the MCP PRO orchestration platform.

Detailed sections cover architectural contracts, runtime memory budgets, error handling semantics, and telemetry capture.

### 2. Implementation Details

The subsystem is encapsulated in the MCP PRO codebase, offering high-throughput, low-latency execution interfaces.

Default parameters are configured for enterprise stability and scalable vector retrieval.

### 3. Validation and Benchmarking Standards

All performance assertions must be validated through automated benchmark suites recording latency percentiles (mean, p50, p90, p95, p99), error rates, and resource utilization.
